

2. Bottom Fore Cap Assembly

Assemble Components into the Bottom Fore Cap

Written By: REA

• Soldering Iron (1)

Step 1 — Threaded Inserts

- Find this bag of M3 Threaded Inserts.
- We heat set these inserts into or 3D Printed components using a soldering iron.

Step 2 — Installing Inserts into Bottom Cap

- Place an insert into the hole. Don't try to insert it all the way.
- Put the tip of the soldering iron into the insert and as the insert heats up you will be able to gently push it into the hole
- Push it in until the insert is flush with the surface.
- Install the other 2 inserts on this side of the cap using the same procedure,

Step 3 — Installing Inserts into Bottom Cap - Continued

- Following the same procedure place the inserts on the bottom of the cap.
- (i) There are 4 inserts to be inserted on the bottom. These are to screw the cap to the bottom hull.

Step 4 — Fore Servo Mount

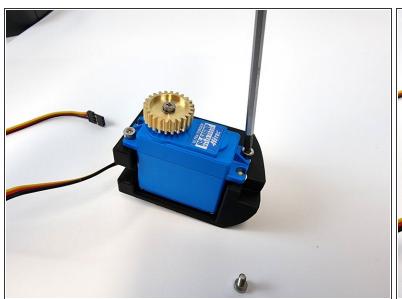

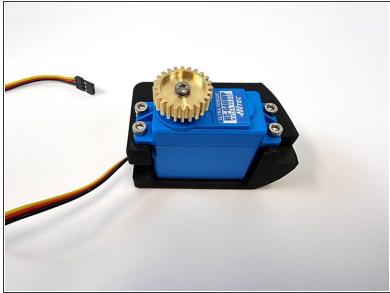

- Locate the Fore Servo Mount and prepare to install the threaded inserts
- Install the inserts 4 on the side and 2 on the bottom

Step 5 — Install the Fore Servo

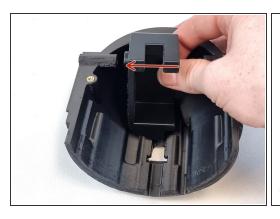

NEnsure you have waterproofed your servo following this guide before installing it.

- Push the wire through the mount first, followed by the servo.
- Insert the 4 x 8mm Socket Head Cap Screws

Step 6 — Install Servo Mount

 Place the servo mount into the bottom cap and slide it to the left as shown seating it onto the shaft for the control rod.

↑ Ensure the servo is mounted into the servo mount before installing it.

Flip the cap over and install 2 x M3 x 12mm socket head cap screws.
